Discover human space flight or career options in human centered-design in space that are advancing in the 21st century. This 7-14 day course at the Florida Institute of Technology, near NASA Kennedy Space Center, managed and organized by the Human-Centered Design Institute (HCDi) and supported by astronauts, provides an up-to-date, interactive and creative environment. You will be immersed in all aspects of human spaceflight with a focus on its essential contribution to life on Earth:

- Sustainability, ecology and economy
- Technology and methodology transfer
- Life sciences and life supporting systems
- Modeling and simulation (digital astronauts and habitats)
- Intercultural, international and interdisciplinary problem solving
